

Product Information Sheet

CUT-EASE Aluminium Cutting and Grinding Lubricant Aerosol with hydrocarbon propellant

Product overview

Cut-Ease is a natural based product formulated specifically to create a lubricating film on the surface of any grinding disc or blade. Cut-Ease reduces clogging of aluminium dust, swarf and fusion creating a nicer finish. Cut-Ease no imperfections in the powder coating or anodising process if used correctly.

Applications

Used on all cutting blades, sanding and grinding disks as well as milling / drilling bits.

Advantages

Cut-Ease creates a cleaner cut by lubricating the blade, stopping aluminium swarf from sticking and then fusing to the blade.

Eliminating this fusion creates a smoother, cleaner cut.

Cut-Ease 400g cans have a directional nozzle for accurate application with no waste.

Application of the product can be done from a safe distance with no necessity to touch blades or moving parts.

Stays on blades for multiple cuts and is vivid-friendly.

Natural based product formulation containing no teflon or silicone ingredients.

Easily removed with warm soapy water, eliminating the need for alcohol or solvent based chemicals.

Direction for use

Shake well before use. For best performance, spray generously onto aluminium area and blade or disc before machine use. Spray in well ventilated area. Do not spray on naked flame or incandescent materials

Product	Aerosol with hydrocarbon propellant
Flammability	Flammable aerosol, DG2.1.2A
Storage	10-40 °C.
Pack size	400g NET
